

IN THE SPECIFICATION

Please amend paragraph [0029] on page 13, as follows:

[0029] Figs. 4—~~and—~~5-6 are cross-sectional views of additional embodiment of the present invention.

Please add a new paragraph after paragraph [0038] on page 18, as follows:

[0038.1] Alternatively, if the engagement member is not the displaceable member (FIG. 6), the projection 440 could be formed depending directly from the flange or the backing plate 411 (as shown in FIG. 6), again say by punching or integral connection. And the abutment arrangement 444 is formed as a component part which is fixed to the backing plate or flange 426 and that part may be formed as the displaceable member, say as a spring clip 442. Either of the engagement members or the abutment arrangement can conveniently be attached to or formed on the first flange for cooperation with the other of the engagement member or the abutment arrangement formed in or attached to the backing plate preferably at a position which underlies the first flange.
